

# Our Mission

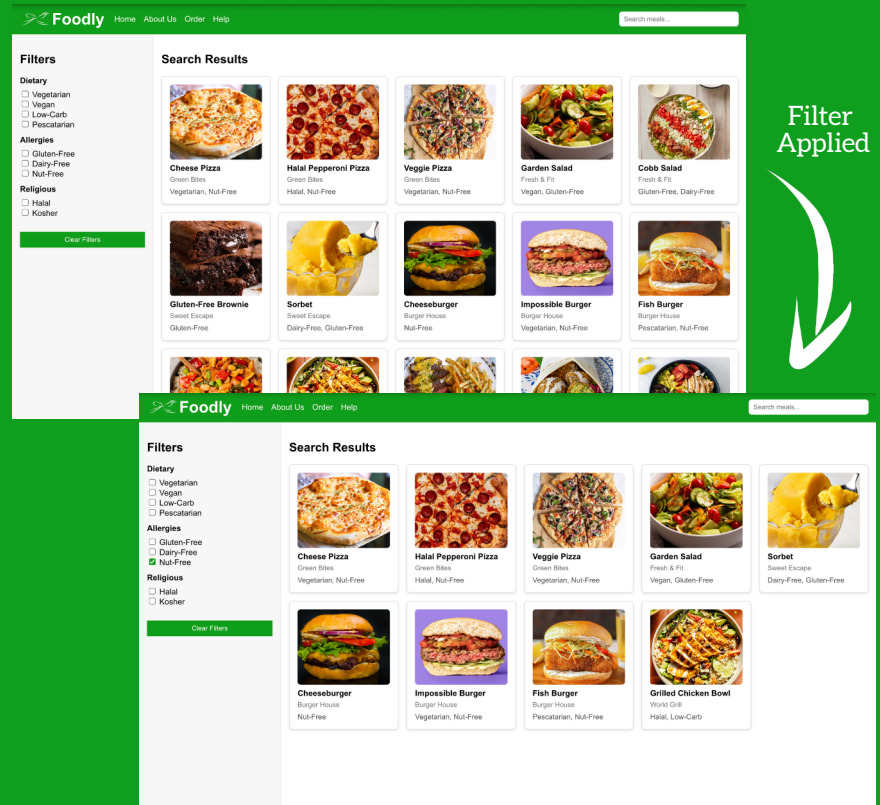

Foodly is a food delivery web application with special search features that aims to make finding and ordering meals easier for people with dietary restrictions. Whether it's for health, allergies, or religious reasons, we seek to provide an easy and intuitive way for users to navigate the options available to them.

# Why Foodly?

In the modern day, there is no shortage of apps and services available to diners looking to order food online. However, often times, sifting through all the options can be overwhelming, and trying to find meals that accommodate dietary restrictions can be even harder. That's why we're creating Foodly.

Foodly will allow users to filter their searches tailored to their dietary needs and preferences, with every menu item being categorized based on its ingredients and preparation. Maybe the user is lactose intolerant, maybe they only eat Kosher, or maybe they simply don't like to eat red meat. In every case, Foodly will help them to find meals that suit their tastes.

In doing so, we hope not only to assist diners, but also help vendors to better serve their customers.

# Use Cases

## Initial

- Vendors can add diet tags to menu items. Multiple tags will be able to be added to any given item.
- Customers can add filters when searching to limit search results based on tags.
- Customers can place an order consisting of one or more menu items from a given vendor.
- Vendors can update the status of an order between set states. The customer will be able to see updates as they happen.

## Future

- Vendors can add multiple versions of menu items. For example, they can add a "No Peanuts" version of a dish that will appear in searches with that tag.
- Customers can label vendors and menu items as favorites.
- Customers can set search filters as defaults.
- Vendors can update the status of an order between set states.
- Vendors can add custom tags for non-search purposes.
